CMJ Instructions for Authors

References

CMJ uses the ICMJE recommendations for reference formatting (http://www.nlm.nih.gov/bsd/uniform_requirements.html), with sequential numbering in the text, and respective ordering within the list. References cited in the manuscript are listed in a separate section immediately following the text. The authors should verify all references. Consult Index Medicus or PubMed (<http://www.ncbi.nlm.nih.gov/entrez/>) for standard journal abbreviations. A reference cited only in a table or figure is numbered in the sequence established by the first mention in the text of the table or figure containing the reference. Do not include MEDLINE ID's or DOI in references. Do not put period after the reference number. Separate the reference number from the (last) name of first author by a single space. Provide names of all authors when there are six or fewer; if there are seven authors or more, list only the first six, followed by et al. Journal references should include the following information, listed in the order indicated: authors, article title and subtitle, journal abbreviation, year, volume number in Arabic numerals, and inclusive pages.
