*Abbreviations: BM – bone marrow; FCM – flow cytometry; GPR – good prednisone response (<1000 blasts/ μ L in peripheral blood on day 8); M1 – <5% blasts; M2 – 5–25% blasts; M3 – ≥25% blasts in bone marrow; MRD – minimal residual disease; PPR – poor prednisone response (≥1000 blasts/ μ L in peripheral blood on day 8).

† χ^2 test comparing patient groups; patients without data or with an inadequate sample were excluded from the test.
